Professional Summary

Self-taught Full-Stack JavaScript developer with 4+ years of practical experience delivering production web projects and open-source tools. Strong track record building and maintaining client sites, contributing to collaborative OSS projects, and shipping a fullstack data-cleaning system used in research workflows. Skilled in Angular, TypeScript, NestJS, and modern backend tooling (queues, caching, monorepos). Fluent English — available for remote work and open to employer-sponsored relocation.

Key Skills

- JavaScript (ES6+), TypeScript, Angular, NestJS, Node.js
- HTML5, SCSS, Flexbox & Grid, Responsive Design, RxJS
- REST APIs, TypeORM, MariaDB, SQL, Data normalization & validation
- Nx monorepo, Docker, Redis, BullMQ, CI/CD (GitLab CI/GitHub Actions)
- Git, Docker Compose, cPanel, Netlify/Vercel
- OOP, Functional Programming, immutable patterns, DSA fundamentals

Languages

- Dari / Farsi — Native
- English — Fluent (IELTS-ready)

Availability

- Available for remote work immediately.
- Open to employer-sponsored relocation and resettlement pathways.

Hobbies & Interests

Swimming, Music, Reading, Traveling, Product design & prototyping, Continuous learning

Selected Experience

Full-Stack & WordPress Developer — Freelance / Independent (Remote) · 2019 – Present

- Built and maintained client WordPress sites and custom themes (design → functionality → ongoing maintenance).
- Transitioned to modern JS stacks (Angular/NestJS) and applied this to open-source and client projects.
- Regularly use Git workflows, Docker, and hosting/admin tools to deploy and maintain projects.

Team Member / Contributor — Symbiota2 (Open Source) · 2021 – Present

- Contributed to migration and feature development in TypeScript, Angular, and NestJS.
- Developed and deployed the project's public documentation site in Angular & NestJS.
- Collaborated with remote contributors on feature tickets, bug fixes, and integration tasks.

Lead Developer — Author Taxon Cleaner (Featured Full-stack Project) · —

- Designed and shipped a scalable data-cleaning system (Angular frontend, NestJS backend) for taxonomy data.
- Implemented chunked processing, Redis caching, BullMQ job queues, TypeORM + MariaDB comparisons, inline editing, and CSV/JSON download + report generation.
- Containerized using Docker and organized code with an Nx monorepo; deployed an MVP for Symbiota2 testing.

Education & Professional Development

- High School Diploma — 2011
- The Odin Project — Full-stack JavaScript path (in progress)
- Coursera (Meta) — Major coursework completed for Front-End & Back-End Professional paths (certificates pending)

Selected Projects & Portfolio

- AuthorTaxon Cleaner — Fullstack system (Angular, NestJS, Nx, Redis, BullMQ, MariaDB/TypeORM).
- Symbiota2 Documentation Site — Angular site deployed for project documentation.
- Odin Project Portfolio Projects — Polished frontend & backend demos with case studies.
